5. Honest messaging boundaries

1. Product overview

FinMate AI helps people turn a busy month of income, spending, bills, budgets, and savings goals into a clear, reviewable plan. It is a responsive personal-finance PWA with BDT-ready display and a transparent month-end estimate.

It is for people who want one calm place to record money movement, reserve obligations, see category pressure, track intentional savings, and ask for a plain-language explanation before making a change.

Core promise
Clearer money decisions: a transparent plan based on the numbers a person records, not a guarantee or automated financial decision.

2. Verified benefits

Feature	Benefit
Overview	Brings balance, cash flow, bills, budget progress, and forecast together.
Ledger	Lets users search, filter, sort, and maintain income and expense records.
Bills	Creates one linked expense when marked paid so paid and unpaid views do not double count.
Budgets and goals	Shows category guardrails and separately recorded savings contributions.
FinMate AI	Explains the current plan and requires review before a proposed budget change is applied.
PWA	Lets compatible browser users install the HTTPS site as an app-like experience.

3. How FinMate works

Step	Simple explanation
Record	Add income, expenses, bills, budgets, and savings goals.
Understand	FinMate separates paid spending, unpaid bills, and expected spending.
Review	Use the dashboard, budget pulse, upcoming bills, goal progress, and activity history.
Decide	The user chooses whether to save a change. FinMate does not move money or auto-pay bills.

4. Shareable copy

Short public description
FinMate AI is a calm personal-finance workspace for tracking income, expenses, bills, budgets, and savings goals. It shows a transparent month-end estimate, keeps bill payments from being double counted, and gives reviewable explanations without making financial decisions for you.

Social post
Want a clearer picture of your month? FinMate AI brings your transactions, bills, budgets, savings goals, and an honest forecast into one simple workspace. Explore the clearly labelled fictional demo at https://finmate-ai-iota.vercel.app/

Bangla shareable introduction

FinMate AI হলো আয়-ব্যয়, বিল, বাজেট ও সেভিংস লক্ষ্য এক জায়গায় গুছিয়ে দেখার একটি personal-finance workspace। এটি স্বচ্ছ month-end estimate দেখায়, কিন্তু কোনো টাকা সরায় না বা স্বয়ংক্রিয় সিদ্ধান্ত নেয় না।

How to share

• Share the exact public HTTPS URL: https://finmate-ai-iota.vercel.app/

• Tell recipients that Explore fictional demo uses sample figures stored only in their browser.

• Tell people who need synchronized private data to create an account and sign in with the same account on each device.

5. Honest messaging boundaries

Use	Avoid
“Helps organise a financial plan.”	“Automatically saves money.”
“Shows an estimate based on recorded figures.”	“Guarantees a month-end balance.”
“Lets the user review a budget proposal.”	“Provides financial advice.”
“Includes a fictional browser-local demo.”	“The demo syncs across devices.”

Setup and product limits

• Cloud syncing needs a signed-in Supabase account. The demo is intentionally local and fictional.

• Optional generative AI needs a server-side provider key. Without it, FinMate provides a labelled rules-based explanation.

• There is no bank, card, payment, or automatic bill-payment connection.

• PWA installation depends on the browser and operating system; it is not a native app-store release.

• FinMate is educational and organisational. It does not provide regulated financial, tax, legal, or investment advice.

Safe public message
Invite people to explore the fictional demo first, explain the difference between demo and private cloud workspace, and avoid promises about saving money or guaranteed results.
